

DTK-TPKL8

66 Block Surge Protection Kit General Product Specifications

The Telephone Protection Kit from DITEK is designed for communication professionals specializing in commercial and small office/home office (SOHO) installations. The 3-outlet 3GTP protects the power line and gives a protected ground lug for systems requiring a chassis ground. Eight SL130A units snap onto the 66 block, protecting eight incoming phone lines. The SL devices not only give overvoltage and overcurrent protection, but also offer DITEK's one-of-a-kind, multi-function diagnostic light. The SIGB provides a single grounding point for all installed SL130A protectors.

DTK-TPKL8

Product Features

- Protects both power and phone lines offering one protect for all your needs
- Snap Lite phone protectors provide telco protection and diagnostics
- Protected ground lug on 3GTP offers fast chassis ground installation and no ground loop concerns
